

Vedant Poman

Second Year B.Tech

PERSONAL PROFILE

Third-year B.Tech student with a focus on integrating AI solutions into scalable web applications. Experienced in building recommendation systems and computer vision tools, from industrial anomaly detection to agricultural diagnosis platforms. Seeking to leverage full-stack development and machine learning skills in a professional software engineering internship.

SKILLS AND ABILITIES

- Programming Languages: Python, Java, JavaScript, C++, Data Structures & Algorithms
- Web & Full-Stack Development: Next.js, React.js, Angular, Node.js, Flask, Django, HTML5/CSS3
- Databases & Cloud: MongoDB, MySQL, Firebase, NoSQL, Microsoft Azure
- Data Engineering & Big Data: Hadoop, MapReduce, Apache Hive, Data Analysis (ESG & Sustainability datasets)
- DevOps & Tools: Docker, Kubernetes, Git/GitHub, Linux (CLI), Ubuntu, VS Code, Power BI

SOFTWARE/TOOLS

- DevOps & Deployment: Docker, Kubernetes, Jenkins
- Cloud & Hosting: Microsoft Azure, Firebase, Vercel
- Operating Systems: Linux (CLI), Ubuntu, Windows
- Data & Analytics: Power BI, Excel, Google Analytics
- API Testing & Documentation: Postman, Swagger

CERTIFICATION and ACHIEVEMENTS

- First in inter college hackathon
- Participant: Smart India Hackathon (SIH).
- Certification: Power BI for Beginners – Coursera.

INTERNSHIP EXPERIENCE

Software Development Intern | Swastik Furnaces

Internship | May 2025 – July 2026

- Maintained and optimized the company website using HTML, CSS, JavaScript, and WordPress.
- Improved UI/UX and mobile responsiveness, significantly enhancing SEO and user engagement.
- Engineered an automated computer vision system using a camera sensor and custom AI models to monitor industrial furnaces and detect metal burning/overheating in real time.

EDUCATION

Atlas Skilltech University

Bachelor of Technology (B.Tech)

DURATION
JULY'24 - JUNE'28

Maharashtra State Board

Higher Secondary Certificate (HSC)

JULY'21 - JUNE'23

PROJECTS

Industrial Furnace Automation System

- Engineered a computer vision system using a camera sensor and AI to monitor industrial furnaces and detect metal burning in real time.
- Designed a safety-stop protocol that instantly halts machinery upon anomaly detection to prevent equipment damage and reduce material waste.
- Automated the material lifecycle by creating logic to safely cycle out burned metal and trigger the mechanical loading of the next batch.
- Optimized sensor inference speeds to ensure near-instantaneous response times, significantly improving industrial operational safety.

Agro Ai

- Developed an AI platform using Google Gemini AI for real-time crop disease diagnosis and farming recommendations.
- Integrated multilingual voice assistance (TTS), market updates, and financial budgeting to boost farmer productivity.
- Tech Stack: Next.js, Flask, MongoDB, Google Gemini AI (LangChain), Tailwind CSS.

ZED Compliance Validator

- Architected an AI assistant to automate ZED Bronze certification by validating PAN, Aadhaar, and GST documents.
- Engineered a high-precision OCR pipeline using Tesseract and Poppler for government document digitization.
- Implemented a secure RAG system with FAISS and local LLMs via Ollama to ensure 100% data privacy.
- Tech Stack: Flask, Python, RAG, FAISS, Ollama.
